Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mixture or panel of antibodies for selecting specific binding members that cross the blood brain barrier, for use in delivering different molecules and treating neurological diseases.

Disclosure; Page 106; 109pp; English.

The present sequence encodes an antibody variable light chain (VL) fragment. The fragment is used to produce a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the DS VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members

```
with a desired property such as ability to cross BBB, ability to bind endochelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The antibodies are useful in diagnosis, prophylaxis and treatment of human or animal body, including neurological diseases, such as Alzheimer's disease, prion disease, AIDS-related dementia, epilepsy and traumatic brain injury and any diseases involving inflammation occurring within the brain or central nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TCCTGCACTGGAACCAGCGATQACGTTGGTGGTATAACTATGTCTCCTGGTACCAACAC 120

```
The present sequence encodes an antibody variable light chain (VL)

fragment. The fragment is used to produce a mixture or panel of 5

different specific binding members, each comprising an antibody VH and/or

CV Variable domain and capable, when displayed on the surface of

filamentous bacteriophage particles or in the case of a specific binding

comender comprising the BS VH and/or VL variable domain when bound to human

compression in the SVH and/or VL variable domain when bound to human

compression anyloid protein, to pass through a mammalian blood brain barrier

compression is useful for the selection of specific binding members

compression in the brain or BBB breakdown or ability to bind

condition in the brain or BBB breakdown or ability to bind

contracellular adhesion molecules and to bind transferrin receptor. The

antibodies are useful in diagnosis, prophylaxis and treatment of human or

animal body, including neurological diseases, such as Alzheimer's

disease, prion disease, AIDS-related dementia, epilepsy and traumatic

brain or central nervous system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

The invention relates to a new modified single chain FV antibody

containing at least two Heavy chain variable domains and at least two

Light chain variable domains from the same or different monochonal

antibodies and which is an agonist for crosslinking a molecule at the

cell surface or within the cell and thereby transducing a signal into the

cell surface or within the cell and thereby transducing a signal into the

cell surface or within the cell and thereby transducing a signal into the

cell surface or within the cell and thereby transducing a signal into the

nicroorganisms transformed by and expressing the preparation of

the antibodies by culture of the transformed cells, drug compositions

containing the antibodies and an assay method for the agonist activity of

the antibodies by contacting the antibodies with cells expressing the

cheaten and prevention of cancer, inflammatory disease, hormonal

disorders including diabetes, autoimmune disease, leukaemia,

dysendocrinism and blood disorders. The present sequence is a DNA

sequence encoding an antibody of the invention or a fragment thereof
                                                                                                                                                                                                                                                                                                                                                                        Modified single chain multimeric Fv antibody acting as a signal transduction agonist for treatment of inflammatory hormonal and blood disorders and cancer.
                                                                                                                                                                                                                                                                          Tsunoda

The invention describes a modified antibody comprising at least 2 heavy cathair variable domains and 2 or more light chain variable domains of an antibody, and exhibits thrombopietin (TPO) agonistic effect by causing the TPO receptor to crosslink. The antibodies are useful in preventives and/or remedies for platelet reduction-associated blood diseases, thrombocytopenia for platelet reduction-associated alseases, can act as a TPO signal transduction agonist by transducing a signal into ells by crosslinking a TPO receptor to exert TPO agonism. This sequence represents thrombopoletin (TPO) agonist antibody associated polymucleotide used in the creation of the modified antibody described in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     124 CCAGGCAAAGCCCCCAAACTCATGATTTATGATGTGCGCTAAGCGGGCCTCAGGGGTCTCT 183

This sequence encodes a VL domain complementarity determining region (CDR) from an antibody specific for estradiol. The invention relates to specific binding members (Sbp) comprising a polypeptide that comprises an antibody antigen binding domain (AABD) which has a dissociation constant of less than 1.0x10^8M for estradiol, and a dissociation constant less than 1.0x10^8M for estradiol, and a dissociation constant test cost of 10 dipher for the steroid hormones selected from estriol, testosterone, dihydrotestosterone, progesterone, estriol 3-suphate and estriol 4 domain. The Sbps can be used in an immunosasy for action mitthody WH domain. The Sbps can be used in an immunosasy for used for monitoring estradiol levels, e.g. during the menstrual cycle, in hormone replacement therapy and for diagnosing oestrogen secreting thurours. The Sbps can provide for discrimination between estradiol and other related steroids

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence encodes the light chain variable region of a human antibody which specifically recognises a lipopolysaccharide (LPS) antigen from Pseudomonas a seruginosa. The coding sequence can be used for preparing cell lines which produce monoclonal antibodies against the LPS. (Updated on 16-OCT-2003 to standardise OS field)

light chain coding sequences of the invention. The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself.

Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel. Fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the presence of adipocyte antigen on the surface of an adipocyte to detect or determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat heavel as can also be produced e.g. intra- abdominal fat associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TCTGATCGCTTCTCTGGCTCCAAGTCTGGCAACACGGCCTCCCTGACCATCTCTGGGCTC 240

Compared to the present anti-adipocyte monoclonal antibody heavy and light chain coding sequences of the invention. The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody can be used as a therapeutic itself.

Antibodies binding specifically to adipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The artibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the presence of adipocyte antigen on the surface of an adipocyte to detect or determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an almost of treatment for obese patients other than undergoing surgery to remove excess fat, Antibodies for different types of fat deposits can also be produced e.g. intra-abdominal fat associated with

Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related

The MAD's are useful for passive immunotherapy and their anti-idiotypic antibodies can be used in the production of vaccines. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to

The present invention relates to a specific binding member which binds human glycoprotein VI (GPVI), comprising an antibody VH domain and/or an antibody VH domain. The antibody VH domain comprises 18B12 VH domain, IC3 VH domain or a VH domain comprising a VH CDR3 or optionally one or more VH CDR. The specific binding and VH CDR3 or optionally one or more VH CDR. The specific binding mamber is useful for the manufacture of a medicament for treating a disease or disorder comprising cardiovascular conditions, thrombosis, stroke, intermittent claudication, conditions with disseminated intravascular coagulation, thrombocytopenic purpura, haemolytic ursemic strokes, intermittent claudication, conditions with disseminated intravascular coagulation, thrombocytopenic purpura, haemolytic ursemic syndrome, damage to blood vessel wall resulting from surgery or therapy, collagen-induced inflammation, homozygous sickle disease, kidney damage collagen-induced inflammation, homozygous sickle disease, kidney damage collagen-induced inflammation, nemperance is a coding sequence of an angiopathic vasculitides. The present sequence is a coding sequence of an antibody domain shown in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New specific binding member binding human glycoprotein VI (GPVI) and comprising an antibody VH domain and/or an antibody VL domain, useful for the manufacture of a medicament for treating a disorder, e.g., thrombosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 TCCTGCACTGGAACCAGCAGTGACGTTGGTTATAACTATGTCTCCTGGTACCAACAG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CACCCAGGAAAGCCCCCAAACTCATGATTTATGATGCGCTAAGCGGGCCTCAGGGGT 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a method for inhibiting the formation of aggregates of certain proteins, involving contacting the procein with a binding molecule known as an intrabody. Proteins to be bound include those associated with neurological disorders, and so the method can be used in the prevention of diseases such as Alzheimer's, Parkinson's and Huntington's diseases, prion disease, frontotemporal dementia, amyotrophic lateral sclerosis, spinal and bulbar muscular atrophy, dentacorubal-pallidoluyaian atrophy, spinocerebellar ataxia type 1 (SCA1), SCA2, SCA3, SCA5, SCA6 and SCA7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Inhibiting intracellular polypeptide accumulation, useful for treating neurological disorders, e.g. Alzheimer's disease, comprises contacting the polypeptide with a specific intrabody.

(VEGER) antagonists in combination with radiation, chemotherapeutic agent, or epidermal growth factor receptor (BGER) antagonist. The method is useful for inhibiting tumour growth in a human, where the tumour (e.g. tumour of the breast, heart, lung, small intestine, colon, spieen, bone, kidney, bladder, head and neck, ovary, prostate, brain, pancreas, skin, bone arrow, blood, thymus, uterus, testicles, cervix or liver) over expresses vGCFR. It is also useful for inhibiting growth of colon tumour or non-small cell lung carcinoma (NSCLC) and tumour overexpressing EGFR. It is preferably useful for treating subjects with both solid tumours, preferably high vascular tumours and non-solid tumours. The inhibition or reduction of tumour growth includes prevention or inhibition of the progression of tumour including cancerous and non-cancerous tumours, where the progression of tumours includes the invasiveness, metastasis, recurrence and increase in size of the tumour. The present sequence is human KDR (VEGFR-2) Fab antibody light chain DNA
administering, vascular endothelial growth factor receptor
```

Sequence 330 BP; 73 A; 104 C; 72 G; 81 T; 0 U; 0 Other;

The invention relates to a novel antibody having a first antigen binding site specific for a first vascular endothelial growth factor (VEGF) receptor and a second antigen-binding site specific for a second VEGF receptor. The bispecific antigen-binding proteins block activation of the VEGF receptor and are useful for reducing proteins block activation of the vector and are useful for reducing or inhibiting VEGF-induced cellular functions such as mitogenesis of vascular endothelial cells and migration of leuksemia cells. The antibodies are useful for treating tumours and for in vivo or in vitro for investigative and diagnostic methods. This polynucleotide sequence represents a human DNA sequence relating to the bispecific antibodies that bind to the VEGF receptors of

New bispecific antibodies having antigen-binding sites specific for a first vascular endothelial growth factor (VEGF) receptor and for a second VEGF receptor, useful for inhibiting migration of leukemia cells, or for treating tumors.

The method is useful for inhibiting tumour growth. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                    Inhibiting tumor growth by administering to a human a vascular endothelial growth factor receptor (VEGFR) antagonist and epidermal growth factor receptor (EGFR) antagonist.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Patent No. 6555455

SEREMAL INFORMATION:
TITLE OF INVENTION: Bh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL
TITLE OF INVENTION: SOFFING METHOD FOR PRODUCTION THEREOF
TITLE OF INVENTION: SOFFING METHOD FOR PRODUCTION THEREOF
TITLE OF INVENTION: SOFFING METHOD FOR PRODUCTION THEREOF
TITLE OF INVENTION: NUMBER: US/09/240,274
CURRENT APPLICATION NUMBER: 60/081,380
SARLIER FILING DATE: 1998-04-10
SARLIER FILING DATE: 1998-04-10
SARLIER FILING DATE: 1996-10-11
NUMBER OF SEQ ID NOS: 224
SOFFWARE: PatentIn Ver. 2.0
SEQ ID NO 137

Sequence 134, Application US/09240274

Patent No. 6255455

James Information

APPLICANT: Siegel, Donald L.

APPLICANT: Siegel, Donald L.

APPLICANT: Siegel, Donald L.

TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL

TITLE OF INVENTION: SONTING METHOD FOR PRODUCTION THEREOF

TITLE OF INVENTION: SONTING METHOD FOR PRODUCTION THEREOF

TITLE OF INVENTION: SONTING METHOD FOR PRODUCTION THEREOF

TITLE OF INVENTION: 1099-04-20

CURRENT APPLICATION NUMBER: 60/081,380

EARLIER FILING DATE: 1998-04-10

EARLIER FILING DATE: 1998-04-10

MUMBER OF SEQ ID NOS: 224

SOFTWARE: PatentIn Ver. 2.0

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
